**“If you want to know what the best is..... listen to what the best are playing”**

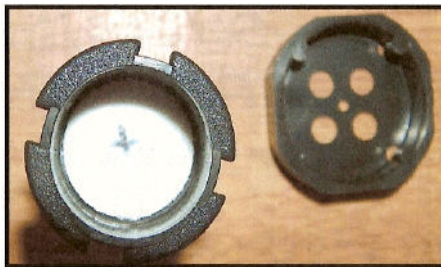

**Please note it is difficult to determine when to carry out this maintenance on your “tone enhancers” as it is entirely dependent on usage etc. Generally it could be a worthwhile exercise to carry out once a year, or if you become aware of any loss of efficiency in your bagpipe e.g. drones stopping.**

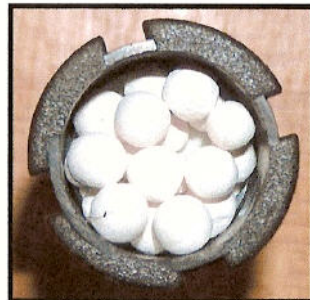

**1. Unscrew the top (anticlockwise)**

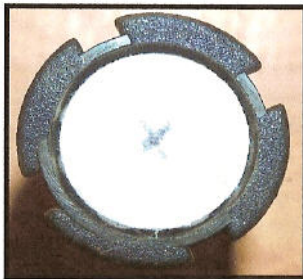

**2. Completely discard the contents**

**3. Place one of the acoustic pads at the bottom as shown.**

**4. Fill with the alumina balls**

**4. Place the second acoustic pad on top as shown**

**5. Refit cap by screwing clockwise .**
