**1. Remove the bridle**

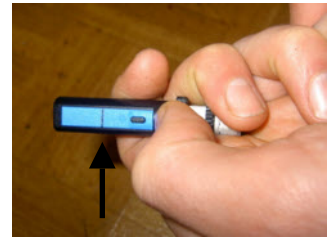

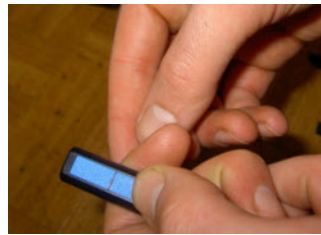

*Holding the blade end of the reed body and applying pressure to the bridle it will slide to the end of the reed body and will easily be removed*

**2. Remove the damaged blade and discard**

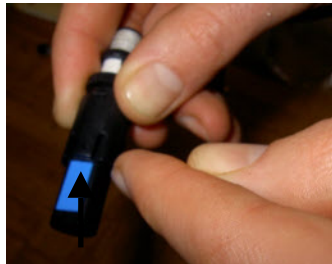

**3. Replace with the new blade ensure that the pen line is facing upwards**

**4. Replace the bridle, ensure that the groove inside the bridle, covers the locator that holds the blade in position**

**5. Position the bridle so that the line on the blade is barely visible.**

**6. Bend the blade by sliding the card provided with your SM 90'S**

**7. Adjust the strength of the reed by “springing and flicking” the blade as shown . Mouth blowing after each flick will act as a guide to how severe you apply the “flicking”**

**Note, the blade will settle after the initial flick and may require further “flicking”**
